Abstract (Basic): DE 19510768 A

Recovery of CO with purity above 98 vols.% from bisphenol A
residues involves splitting the residues at 1000-1600deg. C and 20-80
bars.

USE - The very pure CO can be used as raw material in prodn. of
polycarbonates, e.g. via prodn. of COCl₂, or in prodn. of isocyanates.

ADVANTAGE - Prodn. of CO during combustion or disposal of resin
residue, waste air or halogen-free organic waste is reduced.
